PROJECTS

AI Voice-Based Virtual Assistant using Python

- I built a basic AI virtual assistant using Python that responds to voice commands. It uses speech_recognition to understand spoken input and pyttsx3 to give voice responses. The assistant can tell the time/date, open websites, search online, and respond with greetings. It's a simple, offline-capable project with no frontend or complex APIs—focused on core Python logic.

E-commerce Website

- **User Authentication & Authorization:** Implemented a secure vendor registration and login system with JSON Web Tokens (JWT) for session management.
- **Database Management:** Designed and connected a MongoDB database to store vendor, firm, and product data.
- **Data Relationships:** Established and managed relationships between vendors, firms, and their respective products.
- **CRUD Operations:** Created comprehensive API endpoints to handle Create, Read (fetch single and multiple records), Update, and Delete operations for firms and products.
- **API Deployment:** Deployed the backend APIs to a cloud hosting service.

Personal portfolio

Technical skills

- **Programming languages :**Basic python ,c ,c++
- **Web technologies: MERN STACK,REST API**
- **Tools Used:** VS Code, Browser Developer Tools (Inspect Element),Git, Github ,Excel.
- **Data base :** MangoDB

Languages

- Kannada
- English
- Telugu
- Hindi

SOFT SKILLS

- Flexibility.
- Communication.
- Decision Making.
- Self-motivated & consistent learner
